

How to make AIRTREK

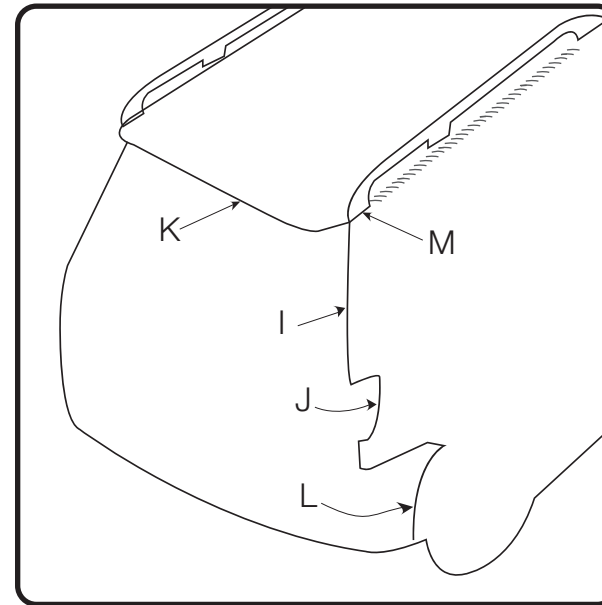

Use a sharp pair of scissors to cut the parts along the outline.

The * marks within the thick border are glue flaps.

Do not fold all glue flaps. Read the instructions carefully as you build.

- A. Cut to the roof line, make the glue flap round without folding it, and glue on.
- B. Make a cut in the hood and glue on so the lines overlap.
- C. Create a cut, and mountain fold the glue flap as you attach it.
- D. Cut to this point and roundly attach the bumper.
- E. Valley fold the window flap and glue on.
- F. Mountain fold the flap and glue on.
- G. Align this line and glue on.
- H. Align this line and glue together.

- I. Mountain fold the flap and glue on.
- J. Glue on so the light roundly connects.
- K. Mountain fold the glue flap and glue on so that it fits in the rear part of the spoiler.
- L. Attach the bumper roundly so this line is aligned.
- M. In the cut of the roof, fold the roof rail in two and with caution of the front and back, glue on.
