

How to make CZ2

Use a sharp pair of scissors to cut the parts along the outline.

The *marks within the thick border are glue flaps.

Do not fold all glue flaps. Read the instructions carefully as you build.

A. Mountain fold the bottom surface and attach the paper with the spec on top of it.

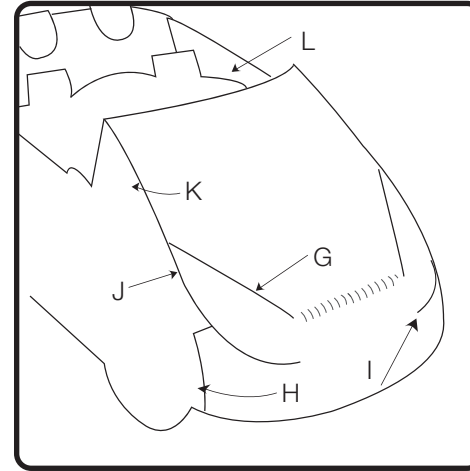

B. Create a cut into the bold line of the back seat and bend inwards. Mountain fold and valley fold the parts to create the shape of the seats and glue on.

C. Glue the reverse side of the front seat folded over from the bottom. Valley fold and mountain fold it and attach to the bottom surface.

D. Cut through the thick line and glue onto the flap so the lines overlap.

E. Make a cut and glue on so that it roundly connects.

F. Glue the headrest folded in half onto the cut out hole.

G. Create a cut, and mountain fold the glue flap as you attach it.

H. Align this line and glue together.

I. Cut to this point and mountain fold the glue flap as you roundly attach it.

J. Mountain fold the flap and glue on.

K. Glue on so it roundly connects to the side.

L. Glue on the interior to the reverse side of the body, and glue on the dashboard you folded earlier.
